Titanium

Partial Frame Onlay & Crown

- **Unsurpassed Fit**
- **Excellent Biocompatibility**
- **100% Digital Design**

BEST FOR YOUR IMPLANT TREATMENT

Medical Grade Titanium Frame and Crown

Patients who are incompatible with every metal out there, especially those containing nickel, titanium is a perfect option. The human body does not recognize titanium as being foreign.

- **Most Biocompatible**

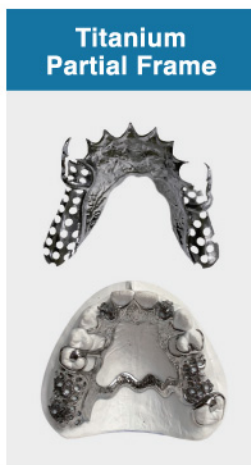

Titanium is the most biocompatible and hypoallergenic material available, making it the best option for those extra sensitive patients.

- **100% Digital design**

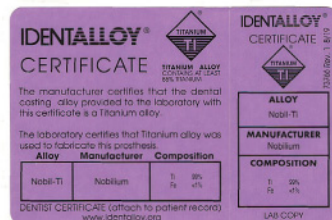

Increase accuracy
Reduce remakes

- **Increase patient satisfaction**

Excellent biocompatibility and unsurpassed fit make patients feel more satisfied than other material.

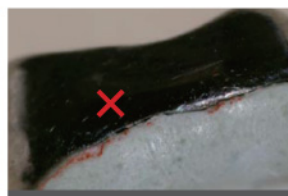

Titanium Onlay & Crown
ADA Code D2794

Identalloy Certificate
99% Titanium

Perfect Fitting

- ✗ **Hand Waxed**

This technique is an old way of fabricating crowns. If margin (the edge of the crown that meets the natural tooth) has an inconsistent fit and poor integrity, this can cause cavities.

- ✓ **Precision Milled**

This technique uses CAD/CAM to fabricate crowns. This means time after time consistent quality crowns with excellent marginal integrity are made eliminating human error. There are no open margins and these crowns are made the same way consistently.
